### Investment Objectives, Focus & Approach of the Underlying Funds

Underlying Funds	Investment Objectives, Focus & Approach
AB SICAV I - All Market Income Portfolio AX USD	<p>Objective: To increase the value of your investment over time through a combination of income and capital growth (total return).</p> <p>Focus and Approach: In actively managing the Underlying Fund, the Investment Manager uses fundamental research and a proprietary quantitative analysis to flexibly adjust investment exposures across various asset classes with the goal of building</p>

	<p>an optimal risk/return Underlying Fund in all market conditions (top-down and bottom-up approach). Under normal market conditions, the Underlying Fund typically invests in equity securities and debt securities of any credit quality of government and corporate issuers anywhere in the world, including Emerging Markets. The Underlying Fund may also seek exposure to other asset classes such as real estate, currencies and interest rates, as well as to eligible indices. The Underlying Fund is not limited in its exposure to equity, debt securities or currencies. The Underlying Fund’s investments may include convertible securities, depositary receipts, REITs and ETFs.</p> <p>The Underlying Fund may invest in, or be exposed to, the following asset classes up to the percentages of assets indicated:</p> <ul style="list-style-type: none"> <li>- debt securities rated below investment grade: 30%</li> <li>- structured products such as asset- and mortgage-backed securities (ABSs/MBSs) and collateralised debt obligations: 20%</li> </ul> <p>The Underlying Fund may be exposed to any currency.</p>
<p>AB SICAV I - Sustainable US Thematic Portfolio A USD</p>	<p>Objective: To increase the value of your investment over time through capital growth.</p> <p>Focus and Approach: In actively managing the Underlying Fund, the Investment Manager invests in securities that it believes are positively exposed to environmentally- or socially-oriented sustainable investment themes derived from the UN Sustainable Development Goals (UNSDGs). The Investment Manager employs a combination of “top-down” and “bottom-up” investment processes. For the “top-down” approach, the Investment Manager identifies sustainable investment themes that are broadly consistent with achieving the UNSDGs such as Health, Climate, and Empowerment. These sustainable investment themes may change over time based on the Investment Manager’s research. For the “bottom-up” approach, the Investment Manager analyses individual companies, focusing on assessing a company’s exposure to environmental, social and governance (ESG) factors. The Investment Manager emphasises positive selection criteria, in particular by analysing the exposure to such ESG factors of each security or issuer, over broad-based negative screens in assessing an issuer’s exposure to such ESG factors. Under normal market conditions, the Underlying Fund typically invests at least 80% of its assets in equity securities of issuers that the Investment Manager believes are positively aligned with sustainable investment themes. The Underlying Fund mainly invests in securities of companies that are organised, or have substantial business activities, in the US. These companies may be of any market capitalisation and industry. The Underlying Fund’s investments may include convertible securities, REITs and ETFs. The Underlying Fund may be exposed to any currency.</p>

## Risks

The ILP sub-funds are not listed on the Singapore Exchange and you can redeem only on Business Days through Singapore Life Ltd. In respect of Singapore investors, there is no secondary market for the ILP sub-fund.

The specific considerations and risks involved in an investment in any of the Underlying Funds are described under “Portfolio-Related Information - Risk Descriptions” section in the Luxembourg Prospectus. The risks of the Underlying Funds may include:

### Emerging/Frontier Markets Risk

Emerging Markets, including frontier markets, are less established and more volatile than developed markets and more sensitive to challenging market conditions. Compared with developed markets, Emerging Markets involve higher risks, both as to frequency and intensity, particularly market, credit, liquidity, legal and currency risks..

### Currency Risk

To the extent that the Portfolio holds assets that are denominated in currencies other than its Base Currency, any changes in currency exchange rates could reduce investment gains or income, or increase investment losses, in some cases significantly. Hedging may reduce but not eliminate currency risk.

### Derivatives Risk

Derivatives are financial contracts whose value is derived from that of an underlying asset, rate or eligible index. Small movements in the value of an underlying asset, reference rate or eligible index can create large changes in the value of a derivative, making derivatives highly volatile in general and exposing the Portfolio to potential losses significantly greater than the cost of the derivative. The Portfolio may use derivatives for various reasons, such as hedging, EPM and investment purposes. Derivatives are specialised instruments that require investment techniques and risk analyses different from those associated with traditional securities. Derivatives are subject to the risks of the underlying asset(s), typically in modified and greatly amplified form, as well as carrying their own risks.

### Equity Securities Risk

Equities can lose value rapidly, in response to such factors as activities of individual companies, general market or economic conditions, or changes in currency exchange rates. Equities typically involve higher (often significantly higher) market risks than bonds, money market instruments, or other debt securities. Equities typically represent an ownership interest in an issuer. Equity securities include common stock, preferred stock, securities convertible into common or preferred stock and equity interest in partnerships, trusts or other types of equity securities. Purchases of initial public offerings of stock may involve higher risks due to various factors including limited shares, unseasoned trading, lack of investor knowledge and lack of operating history of the issuing company.

### Debt Securities Risk

The value of most bonds and other debt securities will rise when interest rates fall and will fall when interest rates rise. A bond or money market instrument could fall in price and become more volatile and less liquid if the security’s credit rating or the issuer’s financial health deteriorates, or the market believes it might. Debt securities carry, inter alia, interest rate risk, credit risk and default risk.

### Sustainability Risk

Sustainability risk means an environmental, social, or governance event or condition that, if it occurs, could potentially or actually cause a material negative impact on the value of the Portfolio’s investment. Sustainability risks can either represent a risk of their own or have an impact on other risks, and may contribute significantly to risks, such as market risks, operational risks, liquidity risks or counterparty risks. Sustainability risks may have an impact on long-term risk adjusted returns for investors. Assessment of sustainability risks is complex and may be based on environmental, social, or governance data which is difficult to obtain and incomplete, estimated, out of date or otherwise materially inaccurate. Even when identified, there can be no guarantee that these data will be correctly assessed.
