## Product-Specific Risks

### You are exposed to Derivatives Risks.

- Derivatives are financial contracts whose value is derived from that of an underlying asset, rate or eligible index. Small movements in the value of an underlying asset, reference rate or eligible index can create large changes in the value of a derivative, making derivatives highly volatile in general and exposing the Underlying Fund to potential losses significantly greater than the cost of the derivative. The Underlying Fund may use derivatives for various reasons, such as hedging, EPM and investment purposes. Derivatives are specialised instruments that require investment techniques and risk analyses different from those associated with traditional securities. Derivatives are subject to the risks of the underlying asset(s), typically in modified and greatly amplified form, as well as carrying their own risks.

### You are exposed to Equity Securities Risk.

- Equities can lose value rapidly, in response to such factors as activities of individual companies, general market or economic conditions, or changes in currency exchange rates. Equities typically involve higher (often significantly higher) market risks than bonds, money market instruments, or other debt securities. Equities typically represent an ownership interest in an issuer. Equity securities include common stock, preferred stock, securities convertible into common or preferred stock and equity interest in partnerships, trusts or other types of equity securities. Purchases of initial public offerings of stock may involve higher risks due to various factors including limited shares, unseasoned trading, lack of investor knowledge and lack of operating history of the issuing company.

### You are exposed to Debt Securities Risk.

- The value of most bonds and other debt securities will rise when interest rates fall and will fall when interest rates rise. A bond or money market instrument could fall in price and become more volatile and less liquid if the security's credit rating or the issuer's financial health deteriorates, or the market believes it might. Debt securities carry, inter alia, interest rate risk, credit risk and default risk.
