### Product-Specific Risks

#### You are exposed to Derivatives Risks.

- The Underlying Fund is entitled to use derivative instruments for hedging and EPM purposes which may involve additional risks different from, and, in certain cases, greater than, the risks presented by more traditional investments. Some of the risks associated with derivatives are market risk, management risk, credit risk, liquidity risk and leverage risk. In adverse situations, the Underlying Fund's use of derivative instruments may become ineffective in hedging or EPM and the Underlying Fund may suffer significant losses. The Underlying Fund will also use derivatives for investment purposes and for the purpose of meeting its investment objective. The Underlying Fund's investment in derivatives may involve additional risks, for example, counterparty default risk or insolvency risk, risk involved with effective management of derivatives strategies, risk of mispricing or improper valuation of derivatives, risk of embedded leverage through investment in a derivative that is itself leveraged, risk of higher volatility, risk of illiquidity in the market for certain derivative strategies and risk of loss greater than the amount invested in the derivative, and may expose the Underlying Fund to significant losses. The failure of a counterparty to a derivative contract to comply with the terms of that contract could cause the Underlying Fund to suffer a loss.

#### You are exposed to Dynamic Asset Allocation Risk.

- The Underlying Fund will allocate to different asset classes, which may have a large impact on returns if one of these asset classes significantly underperforms the others. In addition, as both the direct investments and derivative positions may be periodically rebalanced, there will be transaction costs which may be, over time, significant.

#### You are exposed to Equity Securities Risk.

- The value of underlying equity investments of the Underlying Fund may fluctuate in response to the activities and results of individual companies, or because of general market and economic conditions and changes in currency exchange rates.

#### You are exposed to Fixed Income Securities Risk.

- The NAV of an Underlying Fund invested in fixed-income securities will change in response to fluctuations in interest rates and currency exchange rates, as well as changes in credit quality of the issuer.
