KEY RISKS	
<p>WHAT ARE THE KEY RISKS OF THIS INVESTMENT?</p> <p>The value of the ILP Sub-Fund may rise or fall. The following key risk factors may cause you to lose some or all of your investment:</p>	Refer to the "Risk Factors" section of the Underlying Fund's Singapore Prospectus for further information on the Risk of the Sub-Fund.
Market and Credit Risks	
<p>You are exposed to the market risk</p> <ul style="list-style-type: none"> Prices of securities change daily and can fall based on a wide variety of factors. The effects of market risk can be immediate or gradual, short-term or long-term, narrow or broad. <p>You are exposed to the counterparty risk</p> <ul style="list-style-type: none"> The Underlying Fund suffers loss if a counterparty defaults. The Underlying Fund can try to recover loss by using any associated collateral, but the collateral may be worth less than the cash or securities owed to it. The Underlying Fund's ability to meet its own obligations to other counterparties may be affected. This could delay the processing of redemptions. Securities lending transactions can carry counterparty risk. 	

<p>You are exposed to the credit risk</p> <ul style="list-style-type: none"> The value of a bond or money market security falls if the financial health of the issuer weakens. In extreme cases, the issuer may delay scheduled payments to investors, or may become unable to make payments, and its securities may become worthless. 	
Liquidity Risks	
<p>The ILP Sub-Fund is not listed on the Singapore Exchange and you can redeem only on Business Days through Singapore Life Ltd. In respect of Singapore investors, there is no secondary market for the ILP Sub-Fund.</p>	
Product-Specific Risks	
<p>You are exposed to Rule 144A Securities risk.</p> <ul style="list-style-type: none"> The Underlying Fund may invest in Rule 144A Securities if they are issued with registration rights pursuant to which they may be registered and traded on the US OTC Fixed Income Securities market. They are considered as newly issued transferable securities and if not registered within one year of issue, are subject to a 10% limit of the Underlying Fund's net assets. <p>You are exposed to derivatives risk.</p> <ul style="list-style-type: none"> Derivatives are complex and more volatile than traditional investments. They may involve losses that are significantly greater than the cost of the derivative. The pricing and volatility of some derivatives may diverge from the pricing or volatility of their underlying reference(s). OTC derivatives are less highly regulated than market-traded securities and carry greater counterparty risk and liquidity risk. A suspension of trading in derivatives or their underlying assets could make it impossible to realise gains or avoid losses and could delay the redemption of shares. <p>You are exposed to interest rate risk.</p> <ul style="list-style-type: none"> When interest rates rise, bond values generally fall. The longer the maturity of bond investments, and the higher the credit quality of the bond, the greater the risk. <p>You are exposed to currency risk.</p> <ul style="list-style-type: none"> Changes in currency exchange rates could reduce investment gains or increase investment losses and can happen rapidly and unpredictably. <p>You are exposed to operational risk.</p> <ul style="list-style-type: none"> Human error or process/system failures, internally or at our service providers, could create losses for the Underlying Fund. <p>You are exposed to risks of SFTs.</p> <ul style="list-style-type: none"> There is a risk of collateral received yielding less than securities lent (for SFTs) by the Underlying Fund. The Underlying Fund may be exposed to risks similar to those associated with options or forward derivatives including counterparty default or delay in the return of securities, as well as operational risk, liquidity risk, custody risk and legal risk. <p>You are exposed to the risk of investment in other UCITS or UCIs.</p> <ul style="list-style-type: none"> Investors may pay investment and/or management fees both to the Underlying Fund and to the underlying fund of the Underlying Fund, which could be higher than the investor might pay to invest directly in a similar investment <p>You are exposed to sustainability risk.</p> <ul style="list-style-type: none"> Sustainability risks may fluctuate depending on investment opportunities and this may impact the value of investments over the long term.
