**KEY FEATURES OF THE SUB-FUND**

**WHAT ARE YOU INVESTING IN?**

- You are investing in an ILP sub-fund that feeds 100% into the Underlying Fund, a unit trust constituted in Singapore that aims to maximise returns with high yield and capital appreciation over the longer term, by investing primarily in Emerging Markets debt investments and products.
- The current distribution policy is to make regular monthly distributions in respect of Distribution Classes only, of 4.5% p.a. (or such other frequency or percentage as the Managers may from time to time determine) of the NAV per Unit of the relevant Distribution Class as at the Distribution Date, provided that no distributions will be made in the first 6 months (or such other period as the Managers may determine) following the inception of the Underlying Fund's relevant Distribution Class. The making of distributions is at the Managers' absolute discretion and is not guaranteed and may have the effect of lowering the Underlying Fund's NAV.
- Please refer to product summary for distribution of dividends.

Refer to Paragraph 5 of the Underlying Fund's Prospectus for further information on key features of the sub-fund.

**Investment Strategy**

- The Underlying Fund invests primarily in debt securities (including non-investment grade securities) and debt obligations issued by any entity located, incorporated or having significant business operations or assets in the Emerging Markets.

<sup>1</sup> For ILP sub-fund that feed 100% into an underlying CIS fund, some of the information provided below could be similar to the underlying CIS fund.

<sup>2</sup> In order for units in the ILP sub-fund to be classified as Excluded Investment Products, the investment objectives and investment focus of the ILP sub-fund, and investment approach of the manager have to be stated in the product summary:

- (a) to invest only in deposits or other Excluded Investment Products; and  
(b) not to engage in securities lending or repurchase transactions for the ILP sub-fund.

developments in law or regulations and, in particular, the risks of expropriation, nationalisation and confiscation of assets and changes in legislation relating to the level of foreign ownership, and other changes in the laws, regulations, restrictions and controls in the relevant countries.

**You are exposed to foreign exchange and currency risks.**

- Investments by the Underlying Fund may be denominated in a wide range of currencies, some of which may not be freely convertible. The Underlying Fund's NAV will fluctuate in accordance with the changes in the foreign exchange rate between its base currency (SGD) and the currencies in which its investments are denominated.

**You are exposed to derivatives risk.**

- FDIs involve risks different from, and, in some cases, greater than, the risks presented by more traditional investments. An investment in a FDI may require the deposit of an initial margin and additional deposit of margin on short notice if the market moves against the investment position. If the required margin is not provided in time, the investment may be liquidated at a loss. Therefore, it is essential that investments in FDIs are monitored closely. The Managers have controls for investments in FDIs and have in place systems to monitor the FDI positions of the Underlying Fund.

**You are exposed to synthetic products risk.**

- Synthetic products involve risks that counterparties or underlying entities may not be able to satisfy the terms of such products, for example when a counterparty or underlying entity is insolvent or the product is terminated or invalidated due to bankruptcy, illegality or change in laws. The Underlying Fund may lose its entire investment or be unable to repatriate the proceeds of its investment in such products.

**You are exposed to risks relating to distributions.**

- Dividend/interest income of the Underlying Fund may be adversely affected by (amongst others) investee entities suffering unexpected losses and/or paying lower than expected dividends. In the event that income and/or net capital gains are insufficient, distributions may be made out of capital, which may amount to a reduction of part of your original investment and may result in reduced future returns to you. Payment of distributions (whether out of capital or otherwise) may have the effect of lowering the NAV of the Underlying Fund or the relevant Class.

**You should be aware that the Underlying Fund may be exposed to other risks of an exceptional nature from time to time.**
