Investment Strategy	
<ul style="list-style-type: none"> The Underlying Fund will invest at least 70 per cent of its value in a global portfolio consisting of: (i) shares and share related securities which may be issued by issuers located in any country and which the Investment Manager believes drive or benefit (or have the potential to drive or benefit) from financial innovation, including but not limited to payments technology, digital financial services, mobile banking and blockchain, and (ii) financial derivative instruments. The Underlying Fund will not take positions in cryptocurrencies. However, the Underlying Fund may invest in companies which provide cryptocurrency-related services. Subject to the limits set out in the Investment Restrictions, the Underlying Fund will have the ability: to hedge against directional risk using index futures and/or cash; to hold bonds and warrants on transferable securities; to use options and futures for hedging purposes and for Efficient Portfolio Management; to enter into portfolio swaps; to use forward currency contracts; and to hold liquid assets (deposits, money market instruments and money market funds) on an ancillary basis in order to achieve its investment goals, for treasury purposes and in case of unfavourable market conditions. The Underlying Fund will not take positions in cryptocurrencies. However, the Underlying Fund may invest in companies which provide cryptocurrency-related services. The Underlying Fund has wider investment powers than most of the other Funds within the Company in relation to its use of financial derivative instruments. In particular it has the power to use financial derivative instruments for investment purposes and/or for hedging or Efficient Portfolio Management. While the purpose behind these wider investment powers is designed to enable the Investment Manager to achieve positive returns across varying market conditions, there are specific risks associated with the strategy and the instruments to be used as outlined in the section headed "Risk Factors" of the Underlying Fund's Prospectus. In particular, the Underlying Fund may use futures and options and enter into portfolio swaps in order to gain both long and short exposures to indices, sectors, baskets or individual securities for investment purposes and/or for hedging or Efficient Portfolio Management. For example, core long positions within the portfolio may be wholly or partially hedged from time to time, at the Investment Manager's discretion, using futures, options or portfolio swaps. To the extent that financial derivative instruments are used (whether for investment purposes, hedging or Efficient Portfolio Management), the Underlying Fund's gross exposure to the market will not exceed 150% of its net assets at any time. A large gross exposure in the Underlying Fund will commonly be indicative of increased hedging using financial derivative instruments such as futures, rather than a large directional weighting using financial derivative instruments for investment purposes. The Underlying Fund's maximum long exposure to the market shall be 130% of its net assets and its maximum short exposure shall not exceed 20% of its net assets. There are no sustainability risk-related limits or ESG investment restrictions applicable to the Underlying Fund, save for such restrictions as may arise in line with regulatory requirements. 	Refer to the Underlying Fund's Prospectus for further information on the investment strategy of the sub-fund.

Also, the use of swaps, contracts for differences and other derivative contracts entered into by private agreements may create a counterparty risk for the Underlying Fund concerned. In the event of failure of the counterparty the Company may only rank as an unsecured creditor in respect of sums due from the issuer or broker in question, meaning that the Company may be unable to recover part or all of the assets exposed to that counterparty and any such recovery may be significantly delayed.
